niki.ai

You're to submit the following task on or before the last date as mentioned in the adjoining email message. You're free to use any language of choice, framework, template engine that you're familiar/comfortable with.

Task List

❖ Write a program that accepts an array/list/table of strings (number of strings is asked first), and sorts the array based on length of those strings.

❖ Write a simple RSS feed reader, which lists items from the URL given to it. For sake of simplicity, assume that the URL being given is the reddit's homepage RSS link <https://www.reddit.com/.rss>. Generate an interactive and responsive feed reader that can perform the following tasks:

➢ Hide a feed item from the page

➢ Load an excerpt for the item

➢ Display images, if provided in the item

➢ Link to the host website in the title

➢ A JavaScript `div` in the top right corner, showing:

■ Current system time in ISO-8601 time format

■ Time spent on the page in minutes + seconds

Submission

It is preferred that you create a git repository for the project, hosted on github/gitlab/bitbucket or your own git host of choice. If so, the following SSH key should be allowed clone/read access on the repository:

```
ssh-rsa
AAAAB3NzaC1yc2EAAAADAQABAAABAQCLsUSR3QybVzzZdkB/jIZhEdlYIB/5fDbrWWV7rZwVxKAy6sCED7Dif9Phdc+mAckF/ZhPNgtlv+b1gONmUxZbEOttDC7
jqPkqROdhU+xVGoedvpHfBcs+GjbCrtfutqseINUsXOjB2ysnTAWnPzHmROX7r3LKZmiFly4ZwjuSVKx9O7m/Kyp0Mc+ayqJSCE/fMPd4BH2XDO0RarRPuFWMSE
k7WcRCxLJ4kSp1KMH2M2XppW8LTqtw6xZpaTRPIRY+LtUe09MGGywyV12iQzbAtPhf5s9FcSSTSRB9QK9XmorYGZTVjyT2pcx/QaJtMxpNIofMCDdvHa4bKP3xp
Xj7 teamniki
```

Once the task is finished, respond back with the link to clone the repository.

If unable to comply with the git part, create a `zip/rar/7z/tar.gz` archive of the project, and attach it to your message.

Do mention the libraries and frameworks you've used. If deploying the project requires some dependencies, please mention them in an accompanying ReadMe file.
